Subject: Low Cost Replacement for Obsolete Volume Ventilators in Homecare

Need to replace your obsolete volume ventilators, like LP10's or PLV100's, and don't really need Pressure Support? Newport now offers a perfect replacement for these obsolete ventilators, and at a lower cost.

The Newport HT70S Ventilator is now offered in two new basic configurations: the HT70SM with built-in F_IO₂ monitoring, and the HT70S without built-in F_IO₂ monitoring. Both of these basic configurations have the same exact functionality and advanced features as the Standard configuration of HT70, but without Pressure Support and its supporting features.

Please see ordering information for the two new basic configurations below.

HT70SM-WW-NA, Basic HT70 with
Oxygen Sensor, with English membrane panel

HT70S-WW-NA, Basic HT70 without
Oxygen Sensor, with English membrane panel
